

Fire compliance, run to the calendar.

A maintenance certificate in January and again in July, a register that has to be ready when it is asked for, and signage an auditor will look for — all on a fixed calendar, which is what makes it easy to stay ahead of.

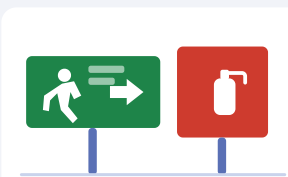

Maharashtra Fire Prevention and Life Safety Measures Act 2006, Section 3(3); Schedule I names hospitals and nursing homes expressly. The certificate is issued by a Licensed Agency; our part is making sure everything it covers is already in order.

What we put in place

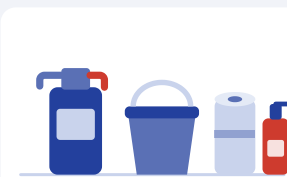

Equipment and service

ISI-marked units across all six agents, installed at correct handle height, refilled annually and hydraulically tested — after a placement audit against IS 2190.

Signage and evacuation plans

Illuminated or self-glowing fire-exit signage to NBC 2016 with local-language text, floor evacuation plans and directional boards.

Everything else on the floor

Housekeeping and washroom consumables, hand wash, stationery and registers — replenished on a set cycle against the same rate list.

What an inspection actually checks

Rarely the extinguisher itself — usually placement, expiry dates, the right agent, and whether the register can be produced on the day.

15 m

Travel distance

Maximum walking-route distance to the nearest unit, measured on the route.

200 m²

Coverage density

At least one unit of minimum 1A rating per 200 m², and one on every floor.

1 year

Service interval

Maximum interval between professional services, with monthly gauge checks.

Class K

Right agent, right risk

Wet chemical at every cooking station; CO₂ or clean agent in server rooms.

What we supply, and where we stand.

FOR NABH-ACCREDITED HOSPITALS, ADD

- A documented maintenance plan for equipment, including refilling
- A valid Fire NOC, or fire-department correspondence every three months
- Fire-exit signage on every floor, illuminated or self-glowing (NBC 2016)
- Evacuation plans on each floor, functional emergency lighting

NABH Revised Advisory for Minimum Essential Fire Safety Measures; Maharashtra DGCD hospital audit checklist

What we supply a hospital

Fire extinguishers	ISI-marked units, all six agents. Installation, annual refilling, hydraulic testing, placement audit and register.
Signage	Fire-exit and safety signage to NBC 2016, evacuation plans, directional boards.
Housekeeping	Cleaning consumables, washroom supplies, sanitisers, gloves, first-aid.
Stationery, records and gifting	Pens, registers, notebooks, copier paper, envelopes and desk consumables. Doctors' day and staff recognition — mementoes, trophies and diaries.

Where we stand on certification

The certificate is issued by a Licensed Agency. Unity is a supply and service provider, not the certifying agency. Our job is to make sure that when the agency inspects, every item it certifies is specified, placed, in date and on the register.

Empanelment. Udyam MSME, GST compliant, registered on GeM, MahaTender and CPPP. Documentation on request — GST and PAN, bank details, returns and a no-blacklisting affidavit.

NO CHARGE, NO OBLIGATION

Free extinguisher audit and floor survey

+91 91569 60605

We measure travel distances, mark placement gaps against IS 2190 and issue an itemised BOQ — yours either way.
